White

Sika Industrial Flooring's color selections are available in epoxy and urethane color additives. Because of the limitations of process color printing, the color samples contained herein are close approximations of actual colors and should not be relied upon for true color. Colors show approximate tone without any texture. Final color matching should be made with an actual sample of the product, color and texture to be used. Gloss level will vary depending on product used.

Custom colors are available. Minimum quantities, adequate lead time and up-charges may apply.

For use with compatible Sikafloor® products only. Please consult Sika Industrial Flooring for further information and pricing.
